- Using Python to develop 3 Twitter bots to tweet applicants' quiz results at Everything Corp(For the Merkle Proof)

Education

March 2018 – June 2022
Benha, Egypt

Bachelor Degree of Data Engineering,
Benha Higher Institute for Engineering

While studying and researching data engineering for 4 years, I developed a special interest in blockchain.
Blockchain is a distributed ledger technology that maintains a safe and immutable record of transactions in a computer network.
I realized that blockchain is the right field for me to jump into.
In addition, I became interested in relational data, non-relational data structuring technology, and globally accepted database technologies, and I learned well about what types of data database systems and tools such as MySQL, SQL, Postgre SQL MongoDB, FireBase, and Supabase are suitable for and applied to.
